

Kestrel UI Review

Kestrel UI Review Package

Whole-product UI review: the React app (primary), its dialogs and views, and the marketing site — with the shared design system reference.

Repository: Kestrel Company Brain

Screens: 28 captures — desktop 1440/1280, tablet 768, mobile 390, OG card 1200×630

Treat every screenshot as current-state evidence.

Return concrete, token-grounded upgrade recommendations (see final pages).

Groups: App core (01–05) · Marketing/brand (06–19, 23–26) ·

Appendix/debug (20–22) · App graph view mobile+desktop (27–28)

Theme reference — “like ZCode”

Dark charcoal surfaces, ONE warm orange accent, ivory text.

The same tokens drive the app (frontend/src/index.css) and the marketing site.

Surfaces bg #1a1a1a · bg-2 #161616 · panel #212121 · panel-2 #2b2b2b · panel-3 #333

Text ink/ivory #f2f0ec · ink-2 #d6d2ca · muted #a8a49d

Accent #E8873A (primary) · hover #F49D54 · dim rgba(232,134,59,.12) · on-accent #1a1206

Lines #2e2e2e / #3a3a3a · radius 12px cards · 9999px pills · focus ring 2px orange

Type Inter — titles 22–58px semibold, body 13.5–16.5px, labels 9.5–12px caps

Components shadcn/ui vendored: button, input, badge, dialog, dropdown, popover, radio-group, switch, tooltip, command, separator, scroll-area, skeleton, sheet

Rules: one accent only; dark-first; honest empty/disabled states with reasons;

AA contrast both themes; reduced-motion; no decorative gradients on copy.

Ask across every document the company has written...

02_ticket_4412_p1_outage.md

P1 outage confirmed; SLA credit flagged for approval — status: pending.

03_meeting_2026-08-14_bluepeak_renewal.md

Renewal window discussed; actions carried into the Aug 28 QBR agenda.

Simulated walkthrough built from synthetic example documents — not a live product session.

HOW IT WORKS

Three steps, no migration project

01

Create a brain

02

Add your documents

03

Ask questions and get answers

file: screens/23-marketing-how-it-works.png

 **Kestrel**

HOW IT WORKS

Three steps, no migration project

01

Create a brain

A brain is a collection for one subject — a client, a product, a team. Keep as many as you need; each one answers only from its own documents.

02

Add your documents

Upload PDFs (including scanned ones — Kestrel reads them with OCR), Word documents, Markdown, CSV, JSON and common code files. Files are re-ingested as you add them.

03

Ask questions, inspect the sources

Ask in plain language. Every answer streams with numbered citations — open one to read the exact passage that grounded the claim.

[Product](#) [How it works](#) [FAQ](#)

Private beta coming soon [Request early access](#)

CAPABILITIES

Built and working today

Everything below is implemented in the current product build — this list is the feature set, not a roadmap.

Knowledge organized into brains

Group documents by client, product or team. A brain answers only from what you put in it — no cross-contamination between collections.

Answers grounded in your sources

Kestrel retrieves from your documents before answering, and says so when the answer isn't in them. No answer appears from thin air.

Conversations, not one-offs

Threads keep their context, chats are saved per brain, and you can go back to any earlier question.

A graph of your knowledge

Explore how documents, people and commitments connect — Kestrel builds a knowledge graph as it ingests.

CAPABILITIES

Built and working today

Everything below is implemented in the current product build — this list is the feature set, not a roadmap.

Knowledge organized into brains

Group documents by client, product or team. A brain answers only from what you put in it — no cross-contamination between collections.

Answers grounded in your sources

Kestrel retrieves from your documents before answering, and says so when the answer isn't in them. No answer appears from thin air.

Citations you can open

Numbered references on every answer open the source document and the exact excerpt behind the claim.

Conversations, not one-offs

Threads keep their context, chats are saved per brain, and you can go back to any earlier question.

A graph of your knowledge

Explore how documents, people and commitments connect — Kestrel builds a knowledge graph as it ingests.

Scanned PDFs included

Documents without a text layer are read through an OCR model, so contracts and faxes from the archive still answer questions.

What we ask of you (the reviewer)

Blunt, specific, evidence-based UI review and beautification guidance.

1. Hierarchy & composition: per screen — what reads first, what's off, exact fixes.
2. Spacing/density: a concrete spacing + type scale for the app shell (tokens above).
3. Beautification: per-component upgrades (prompt box, thread, sidebar, dialogs, graph, connectors) that stay inside the token system — no new frameworks.
4. Empty/disabled states: better honest-state patterns (see dialog + graph shots).
5. Consistency audit: deviations between app and marketing uses of the theme.
6. Reference designs: give exact Tailwind/shadcn specs (classes, sizes, radii) for your top 10 improvements, ranked by impact-per-effort.
7. Accessibility: anything below AA on the dark theme, with corrections.

Do NOT propose: new frameworks, light-first redesign, extra accent colors, glassmorphism on copy, or changes that break honest states.

Context the reviewer needs

What each surface IS — so recommendations match reality.

React app (primary): chat + brains + graph + connectors.

CreateBrainDialog → /api/brains/v2 (durable jobs, per-file stages shown live).

Prompt box: streams NDJSON answers; citations resolve from provenance tables.

History: server-backed (save/list/load). Graph: /api/graph circle layout.

Connectors: Slack/Gmail/Drive with honest 'not configured' states.

Legacy shell: full-featured fallback; graph page linked for deep interactivity.

Marketing: static site, 3D hero (Three.js) with static SVG fallback,
simulated walkthrough built from the synthetic demo corpus.

No fake data in the app: 'no workspaces connected' / 'OAuth not configured'
states are REAL (routes not yet configured by the founder).

Ask-flow latency note: generation route currently rate-limited — screens with
empty answers reflect that, not missing UI.
